

ALGORITHM

Mathematical harmony

We find patterns everywhere in nature, correlations and forces which when interpreted through the codes of mathematical language help us to better understand the world we inhabit.

ALGORITHM is a tool that is designed to inspire and facilitate our creativity till we achieve the desired configuration for any project. Like a constellation, a flock of birds or a cloud of frozen rain, this collection brings together beauty and geometry within a lighting system filled with magic.

"The intention was not to design a completely defined and 'finished' product, but a tool which allows any customer to create his own lighting lamp, in relation with the architecture space, the area to light and the desired kind of 'graphic pattern'", according to Toan Nguyen.

ALGORITHM is composed of configurations of light globes suspended at different heights and anchored to the ceiling via a floating tubular steel structure. Much more than just a support mechanism this structure contributes to the overall composition with an elegant visual game.

The individual light globes are manufactured from blown glass featuring a striated concentric surface pattern that itself creates a translucent and constantly changing lighting effect. The diffusers are provided with 3,5W LED light fitting that can be dimmed.

Technical aspects can be easily resolved online through the creation of virtual models on the **www.vibia.com** platform until the optimum configuration is reached.

About Vibia

Founded in 1987, VIBIA is a design-oriented lighting manufacturer based in Barcelona. The company operates in more than 80 countries around the world, including a subsidiary in the United States. VIBIA's mission is to provide the right solution, with a unique range of products that inspires the creative abilities of architects, interior and lighting design professionals.
